

Phase 1: Protection Phase (weeks 0-6)

Gregory N. Lervick, MD Andrew Anderson, PA-C 952-456-7111

POST-SURGICAL ORIF CLAVICLE FRACTURE (OR NON-UNION)

REHABILITATION PROTOCOL

□ Reta	tect the surgical reconstruction. ard muscular atrophy. crease pain/inflammation.
☐ 1 to	y of in-office visits 2 visits over first six weeks to monitor patient compliance and erstanding
Shoulder I	range of motion ne
0 0	otion sive to active motion, progress as tolerated 0-130° Pronation to supination as tolerated Support elbow with contralateral hand droop with arm hanging unsupported is contraindicated.
Strengthe Gentle Flexic Abdue Exten	ening Exercises (begin at 10-14 days post-op) le Isometrics on ction
□ Mini □ Sati	ir progression to phase 2: imal pain and tenderness isfactory radiographic follow up with physician od (grade 4/5) MMT of external and internal rotation and abduction

Phase 2: Intermediate Phase (weeks 6-12)

Goal	ls
	Reestablish full nonpainful ROM
	Retard muscular atrophy
	Regain and improve muscular strength
	Normalize arthrokinematics
	Improve neuromuscular control of shoulder complex
Rang	ge of motion exercises
	T-bar active-assisted ROM exercises
	 Flexion to tolerance
	 External and internal rotation (begin at 0° abduction, progress to 45°
	abduction, then to 90° abduction)
	Rope and pulley flexion
	Pendulum exercises
	Self-capsular stretches
Stre	ngthening exercises
	Isometrics
	External and internal rotation, abduction, extension, biceps, triceps
	Progress to isotonic strengthening (light resistance with dumbbells or
	equivalent)
	Shoulder abduction Shoulder automaian
	Shoulder extension Shoulder extension
	Shoulder external and internal rotation
	Biceps and triceps Scanular musculature
	 Scapular musculature Initiate neuromuscular control exercises (PNF)
	Initiate manual resistance
	Initiate upper extremity endurance exercises Phythmic stabilization exercise for shoulder flexion extension
	Rhythmic stabilization exercise for shoulder flexion-extension
No s	houlder press or bench press or pectoralis deck or pullovers
Decr	ease pain / inflammation
	Ice, modalities prn
Crite	eria for Progression to Phase 3
	Full nonpainful ROM
	Satisfactory radiographic follow up with physician
	No pain and tenderness
	Strength 70% of contralateral side

Phase 3: Dynamic strengthening phase (weeks 12-16)

Goals ☐ Improve strength, power, and endurance ☐ Improve neuromuscular control and dynamic stability to the AC joint ☐ Prepare the athlete for overhead motion				
Strengthening exercises Continue isotonic strengthening exercises Initiate light bench press, shoulder press (progress weight slowly) Continue with resistance exercises for: Shoulder abduction Shoulder external and internal rotation Shoulder flexion Latissimus dorsi (rowing, pull-downs) Biceps and triceps Initiate tubing PNF patterns Initiate external and internal rotation at 90° abduction Scapular strengthening (four directions) Emphasis on scapular retractors, elevators Neuromuscular control exercises for GH and scapulothoracic joints Rhythmic stabilization Shoulder flexion-extension Shoulder external and internal rotation (90/90) Shoulder abduction-adduction PNF D2 patterns Scapular retraction-protraction Scapular elevation-depression Program to plyometric upper extremity exercises Continue stretching to maintain mobility				
Criteria for progression to Phase 4: ☐ Full nonpainful ROM ☐ No pain or tenderness ☐ Isokinetic test that fulfills criteria (shoulder flexion-extension, abduction-adduction) ☐ Satisfactory clinical examination				
Phase 4: Return to activity phase (weeks 16 – recovery)				
Goal ☐ Progressively increase activities to prepare patient/athlete to full functional return				

_							
E	•	Δ	r	\sim 1	e	Δ	C
_	•	┏				ㄷ	-

Initiate interval sports program
Continue all exercises listed in phase 3
Progress resistance exercise levels and stretching

This protocol provides you with general guidelines for the patient undergoing open reduction internal fixation of a clavicle fracture or nonunion.

Specific changes in the program will be made by the physician as appropriate for the individual patient.

Questions regarding the progress of any specific patient are encouraged, and should be directed to Dr. Lervick at **952-456-7111**.
