

Gregory N. Lervick, MD Andrew Anderson, PA-C 952-456-7111

## NONSURGICAL ANTERIOR GLENOHUMERAL INSTABILITY REHABILITATION PROTOCOL

The p	program will vary in length for each individual depending on several
	Severity of injury.
	Acute versus chronic condition.
	ROM/strength status.
	Performance/activity demands.
Retur	rn to sport criteria:
	Absence of pain
	<b> </b>
	Little to no apprehension
	Note: Functional bracing (i.e. Sully or Duke-Wyre) may be considered on
	an individual basis, depending upon sport and/or position
	Imaging with magnetic resonance imaging (MRI) may be considered in the patient evaluation, depending upon individual presentation
Phas	e 1: Acute Motion Phase
Goals	<b>S</b>
	Reestablish nonpainful ROM.
	Retard muscular atrophy.
	Decrease pain/inflammation.
the ar	During the early rehabilitation program, caution must be applied in placing nterior capsule under stress (i.e., avoid abduction, external rotation) until mic joint stability is restored.
Decre	ease Pain and Inflammation
	Therapeutic modalities (e.g., ice, electrotherapy).
	Gentle joint mobilization.
Rang	e of Motion Exercises
	Pendulums
	Circumduction
	Rope and Pulley
	o Flexion
	<ul> <li>Abduction to 90 degrees, progress to full ROM</li> </ul>

□ L-Bar		
<ul> <li>Flexion</li> </ul>		
<ul> <li>Abduction</li> </ul>		
<ul> <li>Internal rotation with arm in scapular plane.</li> </ul>		
<ul> <li>External rotation with arm in scapular plane. (progress arm to 90</li> </ul>		
degrees of abduction as tolerated)		
□ Posterior capsular stretching.		
<ul> <li>Upper extremity ergometer.</li> </ul>		
Shoulder hyperextension is contraindicated.		
Strengthening Exercises		
□ Isometrics		
<ul> <li>Flexion</li> </ul>		
<ul> <li>Abduction</li> </ul>		
<ul> <li>Extension</li> </ul>		
<ul> <li>Internal rotation (multi-angles)</li> </ul>		
External rotation (scapular plane)		
<ul> <li>Weight shifts (closed-chain exercises).</li> </ul>		
Criteria for Progression to Phase 2		
□ Full ROM.		
☐ Minimal pain of tenderness.		
Good" MMT of internal rotation, external rotation, flexion, and abduction	n.	
Phase 2: Intermediate Phase		
Goals		
<ul> <li>Regain and improve muscular strength.</li> </ul>		
□ Normalize arthrokinematics.		
<ul> <li>Improve neuromuscular control of shoulder complex.</li> </ul>		
Initiate Isotonic Strengthening		
□ Flexion		
<ul><li>Flexion</li><li>Abduction to 90 degrees.</li></ul>		
<ul> <li>Flexion</li> <li>Abduction to 90 degrees.</li> <li>Side-lying external rotation to 45 degrees.</li> </ul>		
<ul> <li>Flexion</li> <li>Abduction to 90 degrees.</li> <li>Side-lying external rotation to 45 degrees.</li> <li>Shoulder shrugs</li> </ul>		
<ul> <li>Flexion</li> <li>Abduction to 90 degrees.</li> <li>Side-lying external rotation to 45 degrees.</li> <li>Shoulder shrugs</li> <li>Extension</li> </ul>		
<ul> <li>□ Flexion</li> <li>□ Abduction to 90 degrees.</li> <li>□ Side-lying external rotation to 45 degrees.</li> <li>□ Shoulder shrugs</li> <li>□ Extension</li> <li>□ Horizontal Adduction</li> </ul>		
<ul> <li>□ Flexion</li> <li>□ Abduction to 90 degrees.</li> <li>□ Side-lying external rotation to 45 degrees.</li> <li>□ Shoulder shrugs</li> <li>□ Extension</li> <li>□ Horizontal Adduction</li> <li>□ Supraspinatus</li> </ul>		
<ul> <li>□ Flexion</li> <li>□ Abduction to 90 degrees.</li> <li>□ Side-lying external rotation to 45 degrees.</li> <li>□ Shoulder shrugs</li> <li>□ Extension</li> <li>□ Horizontal Adduction</li> <li>□ Supraspinatus</li> <li>□ Biceps</li> </ul>		
<ul> <li>□ Flexion</li> <li>□ Abduction to 90 degrees.</li> <li>□ Side-lying external rotation to 45 degrees.</li> <li>□ Shoulder shrugs</li> <li>□ Extension</li> <li>□ Horizontal Adduction</li> <li>□ Supraspinatus</li> </ul>		
<ul> <li>□ Flexion</li> <li>□ Abduction to 90 degrees.</li> <li>□ Side-lying external rotation to 45 degrees.</li> <li>□ Shoulder shrugs</li> <li>□ Extension</li> <li>□ Horizontal Adduction</li> <li>□ Supraspinatus</li> <li>□ Biceps</li> <li>□ Push-ups</li> </ul>		
<ul> <li>□ Flexion</li> <li>□ Abduction to 90 degrees.</li> <li>□ Side-lying external rotation to 45 degrees.</li> <li>□ Shoulder shrugs</li> <li>□ Extension</li> <li>□ Horizontal Adduction</li> <li>□ Supraspinatus</li> <li>□ Biceps</li> </ul>		

□ Co	te Arthrokinematics of the Shoulder Complex ontinue joint mobilization.  It is a stirred to the shoulder Complex of activity/sport.		
☐ Init	Neuromuscular Control of Shoulder Complex tiation of PNF nythmic stabilization drills		
	e Use of Modalities (As Needed) e, electrotherapy modalities.		
□ Fu □ No	for Progression to Phase 3 all nonpainful ROM o palpable tenderness. ontinued progression of resistive exercises.		
Phase 3 : Advanced Strengthening Phase			
□ lm	prove strength, power, and endurance. prove neuromuscular control. epare patient/athlete for activity.		
Continue	Continue Use of Modalities (As Needed)		
Continue Posterior Capsular Stretches			
Continue Isotonic Strengthening (Progressive Resistance Exercises)			
Continue	Continue Eccentric Strengthening		
Emphasi	ze PNF		
□ Ab	exion-extension oduction-adduction ernal-external rotation orizontal abduction/adduction		
□ Su □ Wa □ Me	Plyometric Training  Irgical tubing  all push-ups  edicine ball (cont. next page)  exes		

**Initiate Military Press** 

**Precaution**: Avoid excessive stress on anterior capsule.

Criteria for Progression to Phase 4			
□ Full ROM			
<ul> <li>No pain or palpable tenderness.</li> </ul>			
□ Satisfactory isokinetic test.			
□ Satisfactory clinical examination.			
Phase 4: Return to Activity Phase			
Goals			
<ul> <li>Maintain optimal level of strength, power and endurance.</li> <li>Progressively increase activity level to prepare patient for full functional return to activity/sport.</li> </ul>			
Continue All Exercises as in Phase 3			
Continue Posterior Capsular Stretches			
Initiate Interval Program			
Continue Modalities (As Needed)			
Follow-up    Isokinetic test.   Progress interval program.   Maintenance of exercise program.			

This protocol provides you with general guidelines for the nonsurgical or inseason rehabilitation of the patient with anterior glenohumeral instability

The frequency of visits may be determined mutually by the patient, therapist, and athletic trainer depending upon patient comfort level, progress, and understanding of the home program.

Specific changes in the program will be made by the physician as appropriate for the individual patient. Patients with persistent instability may be candidates for further evaluation and/or surgical intervention.

Questions regarding the progress of any specific patient are encouraged, and should be directed to Dr. Lervick at **952-456-7111**.
