**MEDIAL PATELLOFEMORAL LIGAMENT REPAIR/RECONSTRUCTION**

---

**Overview**

This is a protocol that provides you with general information and guidelines for the initial stage and progression of rehabilitation according to the general timeframes.

**Questions**

If you have any concerns or questions after your surgery, during business hours call 763-302-2231. You may need to leave a message.

After hours 763-520-7870

**Address**

Maple Grove
9825 Hospital Drive, Suite 104
Maple Grove, MN 55369

Minnetonka
15450 Highway 7, Suite 100
Minnetonka, MN 55345

Robbinsdale
3366 Oakdale Ave. N Suite 103
Robbinsdale, MN 55422

---

**POST OPERATIVE INSTRUCTIONS**

**DIET**

- Begin with clear liquids and light foot (jello, soup, etc.)
- Progress to your normal diet as tolerated

**WOUND CARE**

- Leave operative dressing in place for 2-3 days. Loosen ACE wrap if swelling in foot/ankle occurs.
- Remove surgical dressings 2-3 days after your surgery. If minimal drainage is present, apply band-aids over incisions and change daily
- Swelling and bleeding after surgery is normal. If ACE wrap becomes saturated with blood, reinforce with additional dressing
- Keep your incisions clean and dry until you’re seen back in clinic.
• You may shower as needed after surgery, but cover incisions with plastic bag to keep them dry. No immersion in water, i.e. bath.

**MEDICATIONS**

• Local pain medications were used at the time of surgery. This will wear off in 8-12 hours. If a local “block” medication was given, this could last longer.

• Most patients will require narcotic pain medications for short period of time following surgery. Take per MD request.

• If pain meds are causing nausea and vomiting, contact the office (763-520-7870)

• Do not operate or drive machinery while taking narcotic meds.

• Ibuprofen can be taken between narcotic medication doses to help alleviate pain.

**ACTIVITY**

• Crutches and knee immobilizer are needed after surgery

• Elevate the operative leg above your chest whenever possible to reduce swelling.

• Do NOT place pillows behind your knee, but rather under your foot/ankle. This will maintain good extension of your knee.

• Do not engage in activities that increase pain/swelling in your knee such as prolonged standing, walking, sitting without leg elevated.

• No driving until instructed by surgeon

**BRACE**

• Knee immobilizer is typically used after surgery

**ICE THERAPY**

• Begin immediately after surgery

• Ice machines can be used continuously, or ice packs every 2 hours for 20 minutes daily until post-op appointment. See page 5 for more information.

**POST OP APPOINTMENTS**

**First post op visit (7-10 days)**

Your first post-op appointment is about 7-10 days from surgery. You will see the PA to review your surgery and have the sutures removed. Please bring any operative pictures with you to this appointment to enhance your understanding of your surgery.
What to expect after surgery

• Swelling is common after surgery. Ice and elevation are recommended. Muscle cramps may occur. Elevate toes above your nose.

• Pain medications will be needed for the first several days. Switch to ibuprofen or acetaminophen (if not contraindicated) as soon as possible.

• Physical therapy is generally needed after surgery to strengthen your knee and surrounding muscles.
Physical Therapy

These exercises should be started the 1-2 days after surgery. These will be all the required exercises until you are seen by your physical therapist in the office. It is important to begin working on range of motion right after surgery as this will help in your overall recovery.

HOME EXERCISES

**ANKLE PUMPS**

3 sets of 15, 3-6 times per day
MOVE YOUR FOOT UP AND DOWN

**QUADRICEPS SETS**

3 sets of 10, 3-6 times per day
PLACE TOWEL ROLL OR PILLOW UNDER HEAL. TIGHTEN THIGH MUSCLE AND HOLD FOR 5 SECONDS.

**LEG LIFTS**

3 sets of 10, 3-6 times per day
WHILE IN THE KNEE IMMOBILIZER, RAISE LEG OFF THE FLOOR 6 INCHES, KEEPING THE KNEE STRAIGHT.
